Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	4 Marks

Empathy map:

Opti Crop: Smart Agricultural Production Optimization Engine

The empathy map represents the needs, thoughts, actions, and emotions of farmers, who are the primary users of the OptiCrop system. It helps understand the challenges farmers face while selecting crops and how an AI-powered recommendation system can support better decision-making. By analyzing the farmer's perspective through the Says, Thinks, Does, and Feels categories, the project is designed to provide accurate crop recommendations based on soil and environmental conditions. This user-centered approach ensures that OptiCrop addresses real agricultural problems, improves productivity, reduces resource wastage, and promotes sustainable farming practices.

EMPATHY MAP – OPTICROP

Smart Agricultural Production Optimization Engine

SAYS

"Which crop will give me the best yield this season?"

"Fertilizers and water are becoming expensive."

"I want accurate recommendations instead of guessing."

"I need simple solutions that are easy to use."

"I want to earn more from my farm."

THINKS

"I hope I choose the right crop for my soil and climate."

"If I use resources wisely, I can increase my profit."

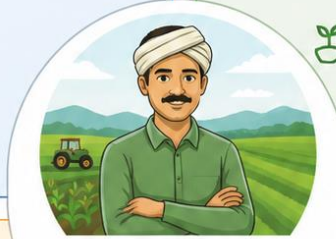

Unexpected weather or diseases may damage my crop.

"I want better yield with minimum risk."

I need trustworthy and reliable guidance.

FARMER

Goal: Increase Yield,
Reduce Cost & Make
Better Decisions

DOES

Checks soil condition, pH, moisture and weather information.

Seeks advice from experts, neighbors or internet.

Enters soil and environmental data into the OptiCrop system.

Follows the recommended crop and best practices.

Monitors crop growth and analyzes results.

FEELS

Worried about crop failure and financial loss.

Stressed due to high input costs and unpredictable weather.

Hopeful when getting the right recommendation.

Confident while making data-driven decisions.

Satisfied and happy when yield and profit increase.
