

Journey map

Date	27 JUNE 2026
Team ID	SWTID-2026-6540
Project Name	Opti-Crop: Smart Agricultural Production Optimization Engine
Maximum Marks	

Journey map

Stage	User Action	System Response	Outcome
1. Login	User logs into the system	Authenticates the user	Secure access to the application
2. Enter Data	User enters soil, weather, and crop details	Validates and stores the data	Accurate farm information is saved
3. Analyze Data	User starts the analysis	AI processes the agricultural data	Crop and environmental analysis is generated

4. View Insights	User checks analysis results	Displays patterns and environmental insights	Better understanding of farm conditions
5. Get Recommendations	User views suggested crops	Recommends the most suitable crops	Improved crop selection
6. Optimize Resources	User reviews irrigation and fertilizer suggestions	Provides resource optimization tips	Efficient use of water and fertilizers
7. Make Decisions	User follows the recommendations	Supports data-driven farming decisions	Increased productivity and reduced costs
8. Monitor Results	User tracks crop performance	Shows reports and progress	Continuous improvement in farming
